

Local Guide

Team 2: Justice Tolentino/Kevin Bennett

What does it do?

Local Guide is a talent management platform that pairs tourists exploring a new area or activity with subject matter experts that can guide them through said area or instruct them on how to engage with whatever form of recreation the tourist is trying for the first time.

Customer usage and capabilities

Customers or tourists want to see what activities are available in their area. They will be able to provide their location, and they will be given recommendations on their dashboard. They can subscribe to topics and guides that fit their interests most and that they would like to keep track of. For those who have stronger opinions on the performance of one of the platform's providers, customers will be able to leave reviews about their services.

Provider usage and capabilities

Providers or guides want to reach out to customers with the services they are willing to provide, and demonstrate their expertise. Providers will be enabled to list services they partake in on their profiles, which can be discovered through the dashboard the customers will have access too. Customers will then be able to find their contact info in said profile to make an appointment with them. Providers will also be able to reply to any reviews that customers leave about their services.
